# THIRTY-FOURTH ANNUAL REPORT

OF THE

## BOARD OF SUPERINTENDENCE OF THE DUBLIN HOSPITALS.

---

TO HIS EXCELLENCY LAWRENCE DUNDAS, EARL OF  
ZETLAND,

*Lord Lieutenant-General and General Governor of Ireland.*

35, Dawson-street,  
17th April, 1892.

MAY IT PLEASE YOUR EXCELLENCY :

We have the honour to lay before Your Excellency our Thirty-fourth Annual Report (for the year ending 31st March, 1892), on the condition and management of the Dublin Hospitals which receive grants from Parliament.

These are :—

1. Westmorland Lock Hospital.
2. The House of Industry Hospitals, viz. :—
  - a. Hardwicke Fever Hospital.
  - b. Whitworth Medical Hospital.
  - c. Richmond Surgical Hospital.
3. Steevens's Hospital.
4. Meath Hospital and County Dublin Infirmary.
5. Cork-street Fever Hospital.
6. Rotunda Lying-in Hospital.
7. Coombe Lying-in Hospital.
8. St. Mark's Ophthalmic Hospital; and
9. Royal Hospital for Incurables, which receives a portion of the Concordatum Fund.

These Hospitals have received much attention from us in our visits of inspection, which were made as heretofore without any previous notification to the officials. After careful inquiry we came to the conclusion that the patients were properly and kindly treated. We visited the wards and other parts of the buildings to examine into their condition to ascertain if proper care were bestowed on ventilation, and on the proportion of inmates to space.

We are able to report that the nursing organization, having

been improved within the last few years, is now generally efficient. Considering it of great importance that well-trained and experienced nurses should be retained in the service of the Hospitals, we have suggested that due provision should be made for their comforts as far as possible, and that their food supply should be carefully attended to, but in carrying out these details we have recommended that economy should be duly considered.

Epidemic illness prevailed so extensively during the year, that the resources of the Hospitals have been subjected to a severe strain. It is also to be regretted that the outlying townships and more distant poor-law unions and municipalities, though they supply patients in large numbers, do not always contribute to their support while under treatment in the city.

Although the matter does not come specially within our province, we wish here to express a hope that an Institution in connection with the above-mentioned Hospitals should be endowed and equipped for pathological, chemical, and bacteriological research. Such an establishment is urgently needed in the interests of Medical Science for medico-legal investigations and for the benefit of the community at large.

The statistical information in the body of this Report and in the various Appendices is set forth upon a uniform plan with a view to an annual digest and comparison.

On the 1st of April, 1891, there remained 709 patients in these Hospitals under the supervision of our Board.

The number admitted during the year was 9,390, making the whole number under treatment 10,099, of whom 8,663 left the wards either cured or relieved, or were discharged for other causes, and 432 died.

Eight hundred and sixty-seven patients remained under treatment in these Hospitals on the 31st March, 1892.

Exclusive of Incurables, the mortality was 4.54 per cent. on those treated to a termination.

The total daily average number of beds occupied in these Hospitals throughout the year was 730.47.

The time spent in Hospital by each patient under treatment (omitting the inmates of the Royal Hospital for Incurables) averaged 21.54 days.

Appendix.—Table No. 1 shows a list of diseases of patients treated in the several Hospitals and the number that died of any particular disease during the year ended 31st March, 1892.

Table No. 2 shows the average cost per bed occupied throughout the year ending 31st March, 1892 for maintenance and for establishment, and for both, exclusive of buildings and furniture.

Table No. 3 shows the several sources of income of each Hospital.

Table No. 4 sets forth in detail the chief heads of expenditure of each Hospital.

Table No. 5 gives the number of patients treated in each Hospital, the mortality per cent., the average daily number of beds occupied during the year, and the present extent of accommodation for each class of patients.

Table No. 6 shows the prices of articles supplied to each Hospital per contract or otherwise.

Table No. 7 gives the various dietaries in use in each Hospital.

Table No. 8 gives the names of the Governors of each Hospital, and number of attendances during the year.

#### LOCK HOSPITAL.

There were 65 adult patients and 7 children in this Hospital on the day of inspection.

We found it in a condition as satisfactory as could be expected, considering the defective character of the building and its surroundings.

The samples of food we examined were of good quality, and the cooking was said to be satisfactory. We suggest, however, for the consideration of the Governors, the advisability of providing a greater variety of diet for the patients, and a more liberal supply of potatoes and of other vegetables at dinner.

We were pleased to observe that several improvements suggested in our previous Reports had recently been carried out. Baths of a more improved and modern pattern with a sufficient supply of hot-water have been provided. New ablutionary arrangements and lavatories are now in use. Instead of there being but one roller as heretofore in common use in the ward each patient is now supplied with a separate towel.

We regret again to be obliged to advert to the faulty position of the laundry which is situated in the basement immediately beneath an occupied ward. We can conceive nothing so contaminating to the sick ward above or more unwholesome to the inmates than the fumes from linen fouled by the excretions of the patients. This subject merits the careful consideration of the Governors, and we hope that they may be able to make more suitable arrangements.

The only exercise ground available for the patients is a small yard with bare walls, a confined shut-in space, and, in our opinion totally unfit for its purpose.

At the same time we cannot see how a better recreation ground can be provided in this Hospital as long as it occupies its present position in the heart of the city. If it could be removed to the suburbs all these improvements could be carried out, as we suggested in a former Report.

Seventy-five patients remained in this Hospital on the 1st of April, 1891; 577 were admitted, including 9 children born in the house during the year; 571 were discharged; 18 died; and 63 remained on the 31st March, 1892.

The mortality was 3.05 on the total number treated to a termination.

The time spent in Hospital by each patient averaged 39.51 days, and the average daily number of beds occupied during the year was 70.59.

#### STEEVENS'S HOSPITAL.

The requirements of the patients appeared in every respect carefully considered and adequately provided for. The wards were

in a satisfactory condition in respect to cleanliness and ventilation. The blankets and bedding were in good order, and the nursing arrangements under the Lady Superintendent are efficient and continue to give satisfaction. The food was excellent in quality, and served in the wards in a manner suiting the character of the various conditions of patients.

In previous Reports we noted several particulars in which improvement was desirable. We are glad to report that many of these suggestions have been adopted, and carried into effect; those not yet acted on will, we feel sure, receive due consideration at the hands of the Managing Committee.

As the amount, £32 16s. 4½d., expended on the *maintenance* of each bed appeared very high for the year ending March, 1891, we requested the Managing Committee's attention to this subject, and annex a copy of their reply:—

“Doctor Steevens's Hospital, Dublin,

“10th day of March, 1892.

“W. J. Martin, Esq., Secretary Board of Superintendence.

“DEAR SIR,—In reply to your letter of the 1st inst., with reference to the cost of maintenance of the beds in this Hospital, I am directed by the Committee to state, for the information of your Board, that the excessive charge results from the fact that the Trustees have, during the past year, made several improvements in the Hospital, and gone to great expense in painting, &c., and, in addition, have made a change involving, temporarily, an increased expense in the nursing system.

“I am, dear Sir, your obedient servant,

“H. J. ATKINSON,

“Accountant.”

On the 1st of April, 1891, 82 patients remained in the Hospital; 1,320 were admitted during the year; 1,237 were discharged; 61 died; and 104 remained on the 31st March, 1892.

The mortality was 4·70 on the total treated to a termination.

The time spent in Hospital by each patient averaged 22·65 days, and the average daily number of beds occupied during the year was 87·02.

#### THE MEATH HOSPITAL.

There was abundant evidence obtained during our inspection that this Hospital is efficiently administered, and that the patients are treated with care and kindness. We ascertained that the nurses perform their duties with intelligence and fidelity under the Lady Superintendent.

We found the food of good quality, but were not quite satisfied with the cooking, for on the occasion of our visit we observed that the mutton chops to be served to the patients were being fried. This manner of cooking meat for the sick appears to us objectionable, and we suggest that chops should be grilled on a properly constructed grate, the smoke being drawn away by a side flue—an arrangement which would prevent the meat being smoked and blackened.

There was much to admire in the tidiness and general appearance of the wards, and we were pleased to observe that a new department has been erected during the year, partly external to the main building, for receiving and dressing accident cases. This has been a great improvement, as before its erection external accident cases had to be brought into the Hospital, which at night time was calculated to disturb the patients in the wards.

We ascertained that the lavatories, water-closets, and baths have been kept in perfect working order, and that there is also an ample supply of hot and cold water laid on through the house.

The detached Dispensary, which was remodelled the year before, has since been renovated and painted. A new compounding department, fully supplied with all necessaries, has been provided.

The grounds surrounding the Hospital buildings have been newly laid down in grass and flower beds, and seats have been provided. Patients who are not confined to bed, or who are convalescent, have the opportunity for recreation in the open air, which is a great advantage in a city Hospital. The registry of patients and account books appear to be kept with care and accuracy, and the returns called for from time to time are made out, and forwarded to this Board with promptitude.

There were 97 patients in this Hospital at the commencement of the year; 1,266 were admitted; 1,168 discharged; 91 died; and 104 remained on the 31st March, 1892.

The mortality was 7.22 per cent. on the total number treated to a termination.

The time spent in hospital by each patient averaged 25.06 days, and the average daily number of beds occupied during the year was 93.60.

#### CORK-STREET FEVER HOSPITAL.

When visiting this Hospital we were much gratified by the order, regularity, and cleanliness which prevailed. The wards were thoroughly ventilated. There were 62 patients under treatment, all of whom were well attended to. We found the rations of good quality, and the kitchen accommodation and cooking utensils sufficient and in good order.

Owing to the greater variety of infectious diseases now admitted to Hospital since the Infectious Diseases Notification Act came into force, additional wards have been opened and the nursing staff has been increased, the more efficiently to carry out the segregation of patients.

Although fever has prevailed extensively in the city for some years past, the extraordinary and progressive diminution in the number of typhus cases is most satisfactory. This may be ascribed to the improved condition of the humbler classes and the closing of insanitary houses, but also to the administration of the Hospitals in providing accommodation for patients at the earliest stage of disease, thereby preventing the spread of contagion and the consequent increase of pauperism.

From the Returns furnished to us it appears that several cases were admitted during the year which were not infectious cases, and therefore not suitable for this Hospital. We can only account

for this by the difficulty sometimes experienced in recognising the exact form of fever in the undeclared stage.

As a large number of children are admitted annually, new cots of an improved pattern have been provided which facilitate the nursing of infants. Since our last visit the surgery has been remodelled and fitted up with a hot and cold water supply. We have been informed that an arrangement exists which enables nurses from the Baggot-street Nursing Institution to be trained here to attend fever patients.

The death-rate is rather high, which however may be ascribed not only to the severe type of disease which prevailed, but also to the circumstance that many patients enter the Hospital in a dying condition.

At the commencement of the year 26 patients remained in the Hospital; 828 were admitted; 636 were discharged; 65 died; and 148 remained on the 31st March, 1892.

The mortality was 9·27 per cent. on those treated to a termination.

The average daily number of beds occupied was 48·28, and the time spent in Hospital by each patient averaged 20·75 days.

#### HOUSE OF INDUSTRY HOSPITALS.

On inspection, we were pleased to find that this Institution continues to be efficiently conducted in all departments, which is in no small degree to be ascribed to the close care and attention given by the Governors to its administration, and also to the improved system of nursing.

The wards were scrupulously clean and well-ventilated. Attached to each bed diet and prescription cards, including the record of cases, were found as usual written up to date. The air was free from any taint throughout the buildings, and all the sanitary arrangements are said to be satisfactory.

A suitably furnished Children's Ward has been added to the recent improvements in the Richmond Hospital.

Several new water-closets and lavatories have been provided which are all in good working order.

We visited the culinary departments and examined the various articles of food, including bread, beef-tea, milk, &c., which were found without exception of good quality. As far as we could judge the cooking was satisfactory, and no complaint was made to us as to the meals served in the wards.

Under the two experienced Lady Superintendents, intelligent and thoroughly reliable nurses are now being trained in these Hospitals, and when fully qualified for their duties are allowed to attend patients in private houses. We were glad to be informed that attention has been given to the dietary of these nurses, and that increased accommodation has been provided for them in a separate building.

We were pleased to be informed that plans and estimates have been obtained for converting the present chapel into a small-pox Hospital. The new building will contain male and female wards, capable of accommodating 24 beds. All necessary adjuncts, such as

bath-rooms, water-closets, lavatories, &c., will be provided, care being taken to have the sanitary arrangements isolated from the wards.

The carrying out of these plans will involve the erection of a new place of worship for the Roman Catholic inmates. This is being met by the erection of a chapel in a more convenient site; the accomplishment of this scheme has been hitherto postponed for want of funds.

The Richmond and Hardwicke Hospitals having been for some time provided with wire-woven mattresses, the Whitworth Hospital has now, through the generosity of one of the Governors, been similarly furnished.

Within the last year Scott's patent disinfecting chamber, of the largest size—and heated by gas—has been fitted up in connection with the Fever Hospital at a cost of one hundred pounds.

#### HARDWICKE HOSPITAL.

Thirty-five patients remained in this Hospital on the 1st of April, 1891; 555 were admitted during the year; 517 were discharged; 38 died, giving a mortality of 6·84 per cent. on the total number of cases treated to a termination.

The average daily number of beds occupied during the year was 36·54, and the time spent in Hospital by each patient averaged 22·60 days.

#### THE WHITWORTH HOSPITAL.

On the 1st of April, 1891, there were 40 patients in this Hospital; 560 were admitted; 409 discharged; 66 died, giving a mortality of 11·68 per cent. on the total number of cases treated to a termination.

The average daily number of beds occupied throughout the year was 36·48, and the time spent in Hospital by each patient under treatment averaged 23·14 days.

#### THE RICHMOND HOSPITAL.

There were 57 patients in this Hospital when the year commenced; 713 were admitted; 684 were discharged; 24 died, giving a mortality of 3·39 per cent. on 708 cases treated to a termination.

The average daily number of beds occupied in the year was 50·17, and the time spent in Hospital by each patient averaged 23·78 days.

#### THE ROTUNDA LYING-IN HOSPITAL.

This Hospital is conducted with energy and efficiency. The well-deserved reputation it enjoys for the attention which is bestowed on the patients was manifest on inspection, and the renown of its clinical teaching continues to attract a large number of students.

The wards were cheerful and well ventilated and the bed clothes were neatly arranged. The linen supply is said to be ample, and

the articles are well washed, but are sometimes returned from the laundry imperfectly dried and aired.

Many improvements have been carried out since our last visit which deserve commendation, and which will tend to the efficient working of the service.

We observed a ward on each storey which is to be allotted to patients in actual labour, the floors of which are laid down with concrete; this, being impervious, obviates a great danger, for the ordinary boards are in time saturated with organic matter, and when moistened are a frequent and unsuspected cause of propagating disease.

Particular attention has been given to the dietary of the pupil nurses, and the board-room has been given up to them as a dining hall until the proposed new building is completed. We observed with satisfaction that the ashpit is no longer used, but that the refuse of the Hospital is removed every morning by the Corporation carts.

We have been informed that the drainage of the Hospital is perfect and that the sanitary condition of the basement story is carefully attended to.

The Governors hope that as soon as the additional buildings are completed, they will be able to make better arrangements for the sleeping apartments of the Hospital servants.

It is to be regretted that no steps have been taken to amend the charter, so as to enable the recommendations of the Dublin Hospitals Commission of 1856 to be carried into effect. We do not wish to lessen the force of the strongly expressed opinion of this Commission, and therefore quote the exact words without curtailment:—

“This Hospital could be rendered still more efficient in answering the purposes for which it was instituted, and the danger of abuse avoided, if certain alterations were introduced into its system.

“The first of these concerns the constitution of the governing body.

“The present qualification for a Life Governor is a donation of £100, and that for an Annual Governor a subscription of £10 per annum. The number of Governors is limited to sixty. We recommend that the qualification be reduced; in the former case to a donation of £30, and in the latter to an annual subscription of £5. We also consider that the number of Governors should be unlimited.”

The Hospitals Commission of 1885 in their able Report strongly favour these changes, and observe:—

“In connection with this matter we have only to add that in the event of our recommendations being accepted, we consider that an amendment of their Charter by the Governors of the Rotunda Hospital should be a condition precedent to the Hospital being entitled to any share in the Parliamentary fund.”

We entirely concur with these recommendations and hope that they will be promptly carried out.

On the 1st of April, 1891, there were 26 patients in the Labour Wards; 1,612 were admitted during the year; 1,610 were discharged after delivery; 368 were discharged, not having been delivered; 6 died; and 22 remained in Hospital at the end of the year.

Twenty-eight patients remained in the Auxiliary or Chronic Department on the 1st of April, 1891; 426 were admitted; 418 discharged; 13 died in the year ended 31st March, 1892; and 23 then remained.

The average daily number of beds occupied throughout the year by labour cases was 30·40, and that of the chronic class 26·56.

The time spent in Hospital by labour cases averaged 0·77 days, and that by the chronic class 21·35 days.

The mortality of the labour patients, deducting 368 non-parturient cases, was 0·48 per cent., and that of the chronic class 3 per cent.

#### COOMBE LYING-IN HOSPITAL.

When we visited this Hospital, the wards were clean and orderly. The dietary was considered ample and nutritious, and the various articles of food, including bread, meat, milk, beef-tea, &c., were of good quality, and the cooking was satisfactory.

As a school for giving instruction in Midwifery and in the diseases of women it continues to hold a high reputation.

We were pleased to find that since our last inspection the whole of the Hospital buildings have been put into a perfectly sanitary condition under the guidance of C. H. Sutton, Esq., C.E.

The old sewers were found leaking and badly jointed, and without a sufficient fall to the main in the street.

These have all been taken up and replaced by new pipes of a superior quality, extra-glazed, properly jointed, and laid on a bed of concrete 6 inches deep.

All drains have been carefully disconnected by patent traps from the main sewer in the street. Extra iron ventilating pipes have been carried from various points of the new sewers to 4 feet over the eave gutters of the various buildings.

There is ample provision for inspecting, cleaning, and flushing all these pipes.

The old closets have been replaced by Triton wash-down and the Unitas wash-out patterns, flushed by syphon cisterns.

As 4 deaths resulting from septicæmia occurred in the Hospital during the year, we deemed it advisable to ascertain if due precautions had been taken to carry out all necessary sanitation, and in pursuance of this object we carefully inquired into the working of the Lying-in department, which comprises two flats containing three wards on the lower flat, and four on the upper.

Labour is conducted alternately on these flats, so that there are always two wards undergoing a thorough disinfection before patients are admitted to them.

We have ascertained that when a patient is admitted, a bed card is written out detailing the character of the labour and the name of the student and of the nurse who attend the patient. Should a serious rise of temperature occur in any case, such patient is at once removed to a separate ward, and a special nurse placed in charge of her. The attending nurse is not allowed to even enter the other wards. She is obliged to absent herself from the Hospital for some time at the termination of the case. The patient's clothes are thoroughly disinfected, and when necessary are all destroyed.

Over the bed of each patient we observed a receptacle which contains carbolic solution, and in which is placed any tube or catheter which may be in use by the patient during her residence in the Hospital.

The tube or catheter, on the departure of each patient, is thoroughly disinfected before being again used.

The pupils are required, before examining any patient, to thoroughly wash and disinfect their hands. We have been informed that any violation of this rule is liable to be followed by the instant dismissal of the offending pupils.

We observed a notice placed prominently in the students' room requesting students who may be attending a Fever Hospital or a dissecting-room not to conduct any midwifery case till they have ceased such attendance.

The master has informed us that should a *post-mortem* be held, no member of the staff is permitted to be present, the autopsy being performed by Dr. Redmond, the pathologist to the Hospital.

We consider all these precautions most advisable to prevent the spread of disease, but on the occasion of our visit the beds appeared in too close proximity; we are of opinion that lying-in patients should have more air-space than other cases, and that at least 100 superficial feet should be allotted to each bed.

We would also wish to impress on those who attend lying-in patients the imperative duty to ever bear in mind the danger of their becoming agents of disseminating disease.

Sixteen labour cases remained in Hospital on the 1st of April, 1891; 643 were admitted during the year; 632 were discharged; 8 died; and 19 remained at the close of the year.

Nine patients remained in the chronic wards on the 1st of April, 1891; 206 were admitted; 196 discharged; 1 died; and 18 remained at the end of the year.

The average daily number of beds occupied during the year by labour cases was 14.19, and by chronic cases 11.64.

The time spent in Hospital by labour patients averaged 7.86 days, and that by the chronic class 19.76.

The mortality of patients admitted to the labour wards (deducting 201 that were discharged, not having been delivered) was 1.82 per cent., or 8 deaths in 439 cases, and for the chronic class 0.50 per cent.

#### ST. MARK'S OPHTHALMIC.

We are happy to be able to reiterate the favourable reports we have previously made respecting the working of this Hospital, and consider it merits a liberal support not only on account of the benefit it confers on the poor, but also for the advantages it affords in forwarding medical education.

The structural defects of the building and the inadequate space for the inmates limit the sphere of its beneficent work. The imperfect ventilation of some of the wards must prove injurious to the patients, and often hazard the success of operations.

We have been informed that the sum of £100 has recently been expended on the water closets and lavatories, under the direction of Thomas Drew, Esq., and that the sanitary arrangements are now considered fully up to the modern standard.

The question of amalgamation with the National Eye and Ear Infirmary as recommended by our Board has engaged the attention of the Governors during the past year, and several conferences have taken place between the Governors of the two Institutions.

The Governors of both Hospitals are in favour of an amalgamation which would insure the building of one large Hospital, to replace the two existing Institutions, and the Governors of the National Eye and Ear Infirmary would willingly consent to an immediate union in the hope that the erection of the building would follow the amalgamation.

The Governors of St. Mark's Hospital do not consider it wise to unite until there is a certain prospect of the new Hospital.

The Governors of St. Mark's Ophthalmic Hospital have proposed to the Governors of the National Eye and Ear Infirmary that the two Boards should draw up and agree upon a Bill to be submitted to Parliament such as would be necessary to effect the amalgamation, and should then bind themselves by resolution to introduce this Bill so soon as (and not sooner than) the capital necessary to build the new Hospital has been subscribed by the public.

On the 1st of April, 1891, 41 patients were in Hospital; 633 were admitted during the year; 626 were discharged; and 48 then remained.

The average daily number of beds occupied during the year was 43·80, and the time spent in Hospital by each patient averaged 23·70 days.

#### THE ROYAL HOSPITAL FOR INCURABLES.

The condition of this Hospital continues to give evidence of its being conducted in all its departments with care and ability. Indeed we have no hesitation in saying that the Victoria wing recently constructed might challenge comparison with any similar Institution for the completeness and perfection of its arrangements.

We were pleased to find that a great part of the old building which has been reconstructed gives more available air-space than formerly, and adds much to the comfort of the patients.

Two wards have been added to the male and female consumptive departments. A handsome new piano has been presented by the Chairman to No. 9 ward, and through the kindness of some friends he was enabled to place a second piano, with piano stool and music wagon, in No. 3—the Catholic women's—ward.

The laundry is working in a most satisfactory manner and has been provided with new porcelain washing troughs, drying chambers, and all necessary appliances.

Power was obtained by a Supplemental Charter to grant out-pensions of £10 a year to any patient who shall have been an inmate for not less than three years, provided that the annual amount so expended should not in any year exceed £100. This has recently been availed of, and there are now four patients on the out-pension list.

We found the cooking arrangements excellent and the samples of food of good quality.

Complaints having been made to us by a patient as to the treatment he had received whilst recently in this Hospital and as to his wrongful dismissal, we caused inquiry to be made into these alleged charges, and find that this patient was reported in June, 1891, for having returned to the Hospital by a gap in the fence, instead of by the principal entrance, and for insolence to the Ward Nurse. The Visiting Committee ordered that he should be confined to the premises for one month. He was reported in the following month for being under the influence of stimulants, and was not allowed outside the grounds for three months. He was warned that if he gave further trouble he would be dismissed. On the 30th October last he had leave till 6 p.m., but he remained out all night and did not return until the morning of the 31st October.

The Visiting Committee then informed him that he would have to leave the Hospital on the 9th November, and that his wife would be handed £1 towards immediate wants.

We entirely concur in the action of the Visiting Committee of the Hospital in this case.

One hundred and seventy-seven patients remained in Hospital on the 1st of April, 1892; 50 cases were admitted; 6 were discharged, resigned, or went out on pension; 41 died during the year; and 180 remained on the 31st March, 1892.

The mortality was 87·23 per cent. on the total number of cases treated to a termination.

The time spent in Hospital by each patient averaged 288·22 days.

The average daily number of beds occupied throughout the year was 179·25.

# APPENDIX.

THOMAS EDWARD GREY,

Registrar.

25th April, 1892.

No. 15,997.

Dublin Castle,  
7th June, 1892.

I have to acknowledge receipt of your letter of the 4th instant, forwarding, for submission to His Excellency the Lord Lieutenant, the Thirty-fourth Annual Report of the Board of Superintendence of the Dublin Hospitals.

I am, Sir,

Your obedient servant,

WEST RIDGEWAY.

The Secretary,  
Board of Superintendence  
of the Dublin Hospitals.
